DECLARATION

I, **P DEEPAK CHOWDARY** hereby declare that the project report entitled “**ONLINE BANKING APPLICATION**” done by me under the guidance of **Dr. SANKARI M**, is submitted in partial fulfillment of the requirements for the award of Bachelor of Engineering Degree in Computer Science and Engineering.

SIGNATURE OF THE CANDIDATE

DATE:

PLACE:

ACKNOWLEDGEMENT

I am pleased to acknowledge my sincere thanks to the **Board of Management** of **SATHYABAMA** for their kind encouragement in doing this project and for completing it successfully. I am grateful to them.

I convey my thanks to **Dr. T. Sasikala M.E., Ph.D., Dean**, School of Computing, **Dr. S. Vigneshwari, M.E., Ph.D.** and **Dr. L. Lakshmanan, M.E., Ph. D., Heads of the Department of Computer Science and Engineering** for providing me necessary support and details at the righttime during the progressive reviews.

I would like to express my sincere and deep sense of gratitude to my Project Guide **Dr.Sankari M, for** her valuable guidance, suggestions and constant encouragement paved the way for the successful completion of my project work.

I wish to express my thanks to all Teaching and Non-teaching staff members of the **Department of Computer Science and Engineering** who were helpful in many ways for the completion ofthe project.

ABSTRACT

Now-a-days, time is treated as money. No one is willing to spend their half a day's time at bank for transactions like balance enquiry, money transfer etc. Complete banking system which is implemented on Java provides complete solution for banking related transactions and you can perform your most important banking chores from the comfort of your home.

The Online Banking Application is an application for maintaining a person's account in a bank. In this project I tried to show the working of a banking account system and cover the basic functionality of a Online Banking Application. To develop a project for solving financial applications of a customer in banking environment in order to nurture the needs of an end banking user by providing various ways to perform banking tasks. also to enable the user's work space to have additional functionalities which are not provided under a conventional banking project. This project has been developed to carry out the processes easily and quickly. This project is developed using JAVA language and MYSQL .

Software Prerequisite:

**->Mysql
-> Eclipse**

MySQL:

MySQL is a full-featured relational database management system (RDBMS). MySQL is a free, open-source relational database management system that uses Structured Query Language (SQL), the most popular language for adding, accessing, and processing data in a database. MySQL is noted for its speed, reliability, and flexibility

->Eclipse

Eclipse is an IDE (interactive development environment) written to develop and debug (primarily) Java code. It contains a base workspace and an extensible plug-in system for customizing the environment.

INTRODUCTION

A Bank is a commercial or state institution that provides financial services, including issuing money in form of coins, bank notes or debit cards, receiving deposits of money, lending money and processing transactions. A commercial bank accepts deposits from customers and in turn makes loan based on those deposits.

This project is basically providing user friendly interface primarily specializing in Banking System A

We are using following details of clients:

1. User Account Number (Mobile Number)
2. Full Name
3. Aadhaar Number
4. Date of Birth
5. Mail ID
6. Country Name
7. Address
 - 7.1 Pin code
 - 7.2 Street name
 - 7.3 House number
 - 7.4 Area/Locality name
 - 7.5 Village/Town name
 - 7.6 District
 - 7.7 State
8. Nominee Details
 - 8.1 Nominee Full name
 - 8.2 Nominee Mobile number
 - 8.3 Nominee Aadhaar number
 - 8.4 Profession
9. Branch Name
10. Password

FUNCTIONALITIES

- Create his account
- View and modify their personal information
- View the balance and transaction history of their accounts
- Make a Transfer (Internal or external)
- Feed and account
- Viewing transactions of deposit.
- View Clients personal information
- View the balance and transaction history of all client accounts

AIM

Online Banking Application is implemented in java platform. Main aim of this project is to develop a simple banking software application through which users can add account, depositing money in to account, withdraw money from the account, request for balance amount available in their account, showing transactions details.

OBJECTIVE

This Online Banking Application lets users create a new account, make cash deposits and withdrawals, access account information through software without the need of going personally to a bank.

This Online Banking Application project has been designed in Java and various actions have different panels. It keeps logs of all the transactions made whether it is withdrawal or deposit of cash. One can create a new account and even delete an existing one. This gives user the facility to work in one's own comfort and at a time convenient for them. It is secure and user-friendly and also in our banking system there is self to self transaction and also peer-to-peer transaction.

EXISTING SYSTEM

The manual Bank Application System that carry out the whole process in a bank are more prone to errors. It takes a vast amount of time to take an action be it the creation of an account or depositing money. It is especially negative when there are time constraints for the customers to get a work done. This makes it a lot inconvenient for the customer as well as it is time consuming. Banks are open only in limited hours in a day and any transaction to be made after those times in cases of emergencies become impossible. This causes a lot of inconvenience.

PROPOSED SYSTEM

This Bank Application System has been designed to overcome all the disadvantages of the traditional banking system. A user has the option of creating an account, cash transactions all at their own discretion. There is a separate module for each and every action and it is really easy to use and secure as well. This software helps save a lot of time, energy and effort that the customers have to go through in carrying out these actions personally.

EXPERIMENTAL ANALYSIS

SYSTEM CONFIGURATION

Hardware requirements:

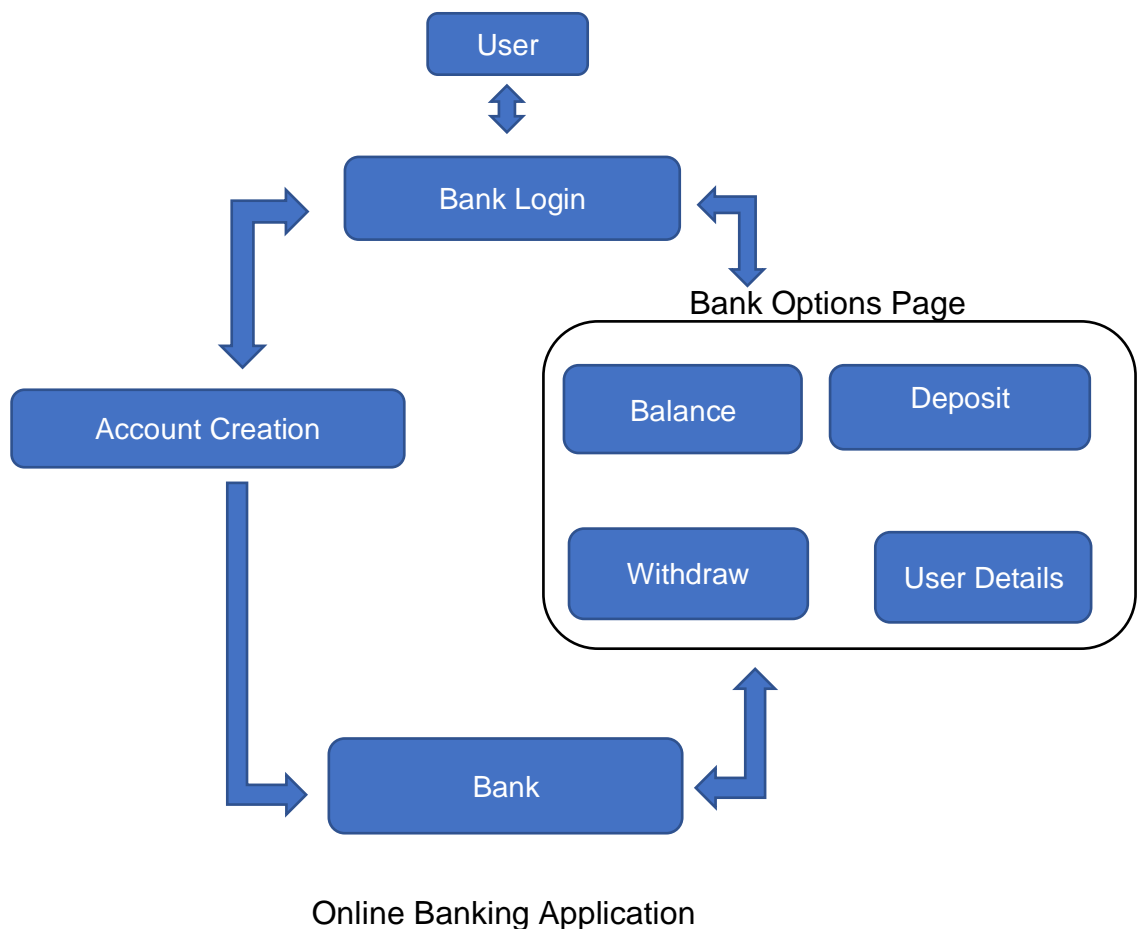

Operating System	:	Laptop Intel i3 3 rd Gen clock speed 2.5 GHz & above
Hard disk	:	min. 10 GB
Ram	:	1 GB or above
Monitor resolution	:	800 X 600

Software requirements:

ANY Operating System (Windows 10 / 8, Linux, Mac)
JDK 8 (Java Development Kit)
JRE 8 (Java Runtime Environment)
Language Used : JAVA 17
Eclipse IDE
MySQL
MySQL Connector

ARCHITECTURE

The system architecture gives an overview of the working of the system. The working of this system is described as follows: Collecting and verifying the user account number and password. If the given details are available in bank database. then they will be got access to login. Else user must create a new account. Bank Options page will be open in that page user can view Balance enquiry, Deposit money, Withdraw money, Transfer money and User Details. User can Choose any option.

This is architectural diagram of banking application ,here we can easily create account , and also deposit ,withdraw ,user Details and also balance ,there are bank options available and also there is about ,it means who created this applications and also there ia exit option in this online banking application.

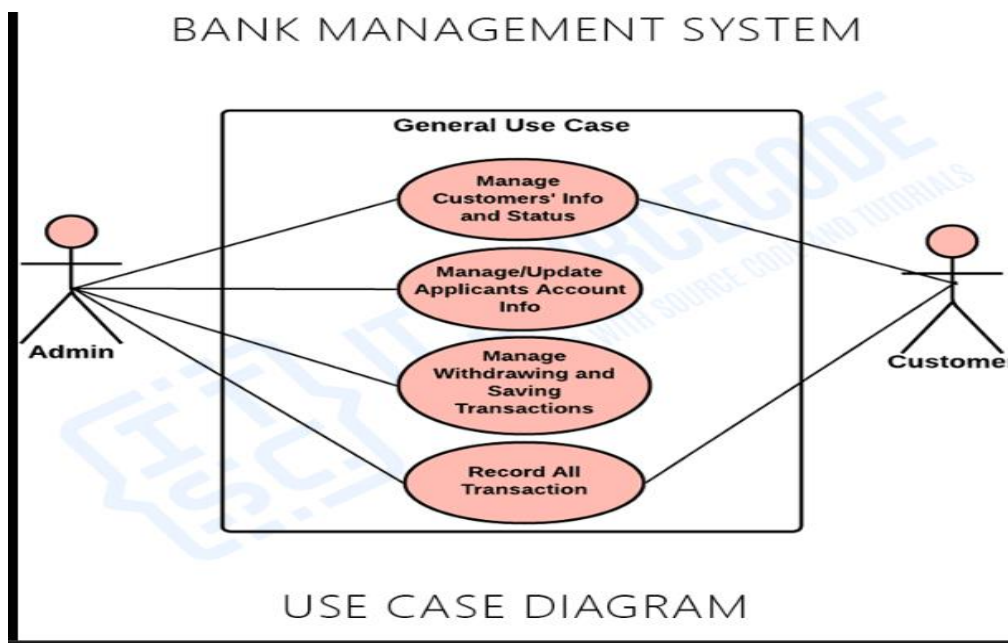

CONCLUSION

We conclude to build a sealable interface that simplifies the banking system handling.

It has the following objectives:

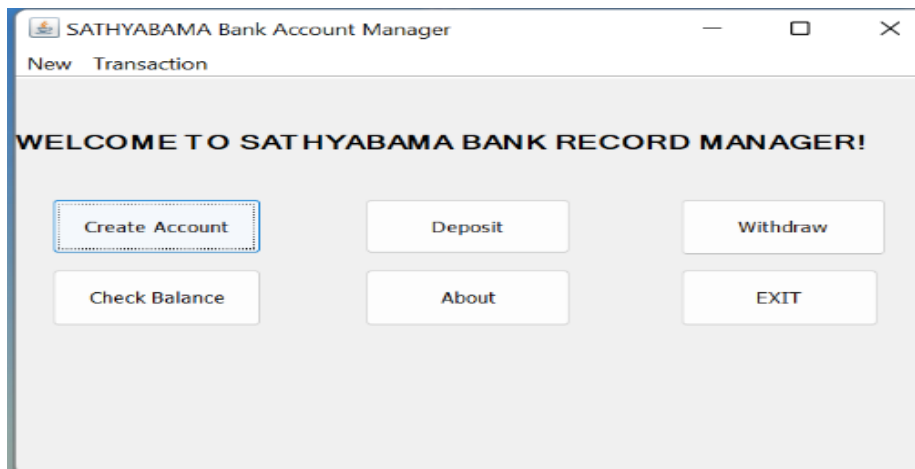

- ➔ Improved access to all transection and other operation.
Easy access and handling of customer account.
- ➔ Detailed access of customer is easy for accountant and all customer and accountant details access is simple for Data Base Manager.

USER DIAGRAM: For Traditional banking application

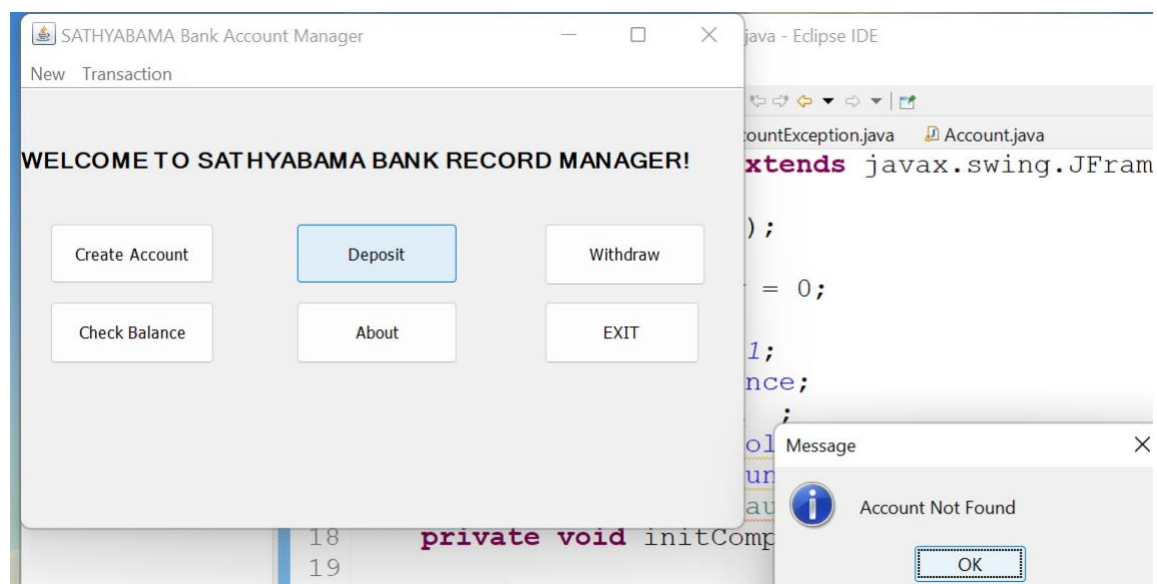

In Traditional banking application use case diagram there will be admin and a customer ,even for transaction we need to go and meet admin and also for account creation it takes av lot of time so it is not well suited,but in online banking application it is easy to create our account and also we can easily withdraw,deposit amount very easily.so we prefer online banking application as compared to traditional banking application
